Abstract (en)

[origin: FR2694920A1] Device having a first container (1) for one of the products, at least one second container (2) for at least one other product, both containers being assembled to be sealed relative to the exterior, while being capable of relative displacement, and sealing means (F) capable of isolating the first container from the second. Said sealing means (F) can be opened in response to a suitable relative displacement of the containers. The sealing means (F) comprise a sealing plate (22) linked to one of the containers and a closure partition (28) with a seat (29) for said sealing plate (22) linked to the other container. In the closed position, the sealing plate (22) is sealingly applied against the seat (29) while a suitable relative displacement of both containers shifts the plate (22) from the seat (29) and opens the sealing means.
