Abstract (en)

[origin: WO9429832A1] A device for securing an electronic module casing comprises an intermediate part (6) to which the casing (1) is fixed, and a rail (5a) receiving the casing (1) and the intermediate part (6). The intermediate part (6) has a locking component (21) with a hook (30) to hold the locking component in a retracted position by cooperating with a complementary projection on the intermediate part (6), the locking component being released when the intermediate part (6) and the casing (1) are fitted to the rail (5a).
