Abstract (en)  
[origin: WO9405090A1] An identification apparatus having receiver means adapted to receive a power and/or information signal(s) and transmitter means adapted to transmit a response signal. A portion of the transmitter means overlaps a portion of the receiver means to enable simultaneous and independent in respective transmitting and receiving signals. Power and/or signal types may include acoustic, optical, capacitive, mechanical, ultrasonic, electric or electromagnetic.
