Abstract (en)

[origin: EP0655300A1] The invention relates to a device for fixing a tube (11) in a sleeve (15). The tube end is inserted into the sleeve (15) and fixed in the latter at least in the axial direction. In order to ensure easy and rapid assembly and also secure fixing of the tube (11) in the sleeve (15), provision is made for the tube (11) to have in its end region at least one bent-out piece (12) which projects radially outwards and is directed opposite the direction of insertion and which enters into engagement with a recess (16) in the inner wall of the sleeve (15). The recess (16) can be formed by a groove (16) running all the way round on the inner surface of the sleeve (15) substantially perpendicularly to the longitudinal axis, so that the sleeve (15) is rotatable relative to the tube (11). <IMAGE>
