Abstract (en)

[origin: EP0655540A2] A description is given of a shutter hinge for window or door shutters, having a carrier leg and a connecting leg which can be adjusted relative to one another and can be clamped with respect to one another in predeterminable positions via at least one clamping member. In this arrangement, the guide between the carrier leg and the connecting leg is designed as a guide which has a pronounced degree of play, and centring surfaces which pass into positively and frictionally locking engagement under the action of a clamping member are provided between the carrier leg and the connecting leg. <IMAGE>
