Abstract (en)

[origin: EP0655599A1] - Air defence system capable of intercepting high-speed airborne missiles (3), including a fixed control installation (1) and defence missiles (2). - According to the present invention: . at the point (F) common to the approach trajectory (T) of the said airborne missile (3) and to the interception trajectory (t) of the said defence missile (2), the said interception trajectory is transversal to the approach trajectory; . the central axis of the homing head of the defence missile (2) is inclined laterally with respect to the axis of the said defence missile (2); and . the said defence missile (2) is roll-stabilised, so that the said central axis of the said homing head is arranged on the side of the said airborne missile (3).
