Abstract (en)
[origin: DE4226680A1] The proposal is for a mobile centrifugal blasting machine which can be moved in a working direction over areas (4) to be sprayed. It has two spinners (7, 8) arranged side-by-side transversely to the working direction which, during operation, generate a jet of particles (43, 44) directed towards an area (4) to be sprayed. This produces in the impact region (33) of the area (4) a central jet region (49) sprayed by the peripheral jet regions (47, 47') of both particle jets (43, 44) directed towards each other, thus giving a very uniform spray pattern over the area (4).
