Abstract (en)

[origin: WO9221065A1] A manufacturing process for producing a controllable membrane (28) within a layer of a light-sensitive material (20) laminated on a support (22) comprising steps: exposing the light-sensitive material layer (20) with light irradiation in presence of an image transfer means to produce unrevealed image (26) in said light-sensitive layer, and re-exposing the unrevealed image (26) to light radiation (24) on the side opposite to light sensitive material layer with respect to the support (22) in the absence of an image transfer means for a time sufficient to produce the integral membrane (28) within the unrevealed image (26).
