Abstract (en)

[origin: EP0656452A1] A tiling panel (1), in which the tiles (6) are arranged on a sheet-like structure, gaps being formed between them, in particular for use as a house-facade panel which is fastened on a lath arrangement (4) which is fitted on the house wall and consists of wood or the like, is characterised in that the sheet-like structure consists of a material which is of an increased strength and exhibits a grid-like hole arrangement which serves for the through-passage of moisture and for fastening, with the result that a tile panel (1) is provided which is distinguished by simple handling since the sheet-like structure is of an increased strength and thus the arrangement of the individual tiles (6) with respect to one another is ensured even in the event of extreme loading, and this together with simultaneous good ventilation of the floor or wall or surface to be clad. <IMAGE>
