Abstract (en)
[origin: WO9405384A2] A grip for stick has a moulded body (20) made of a dimensionally stable material mountable on an end of the stick and a grip casing (22) made of a grasp-friendly material which encloses the shaped body (20). In order to obtain a light grip with a comfortable gripping surface suitable for mass production, the grasp-friendly material is a mixture of an elastomer and of a cork material applied on the inner shaped body (20), in particular by an injection moulding process, in order to form the grip casing (22).
