Abstract (en)

[origin: EP0657117A1] Buckle comprising a lever/tensioner (4) articulated on a base (1) and having a longitudinal notch (6) in which a tie (7) connected to an attaching member (10) is articulated. The notch (6) and the tie (7) are offset laterally with respect to the median longitudinal axis of the lever/tensioner in the direction of the side of the buckle intended to be arranged towards the rear of the boot, whilst the other side of the lever/tensioner has a decreasing height forming a ramp (16, 16a) on which the slalom poles encountered by the boot can slide without risk of catching or opening the buckle. <IMAGE>
