Abstract (en)
A bed comprises a frame structure with an upper body supporting bed frame part 32 and a thigh supporting bed frame part 36, said bed frame parts being inclination adjustably articulated to a support frame 16. The bed further comprises adjustment means 80, 82 for adjusting the inclination angle of each of said bed frame parts 32, 36, and inclination angle determining means in 88 for determining an inclination angle α_1 , α_2 of each of the bed frame parts 32, 36, angular distance determining means in 88 for determining an angular distance α_d between said bed frame parts 32, 36 and safety means for preventing the angular distance α_d from falling below a predetermined value α_{min} in case at least one of said adjustment means 80, 82 is actuated. <IMAGE>
