Abstract (en)

[origin: EP0657572A1] A method for producing a woven/non-woven thermoadhesive product particularly for interfacings for use in the clothing field, comprising dots melting at differential temperature and formed by melting heat-sensitive resins and then extruding them onto an indented roll of low adhesion material, transferring the material from the transfer belt to a woven/non-woven substrate, activating with electrical charges, and depositing resin microgranules having a melting point different from that of the base material.
