Abstract (en)

[origin: EP0657601A1] According to the invention it is characterised in that it comprises: - a rigid horizontal section (2) fixed to the vertical framework (1) and having an upper clipping flange (6) and a lower flange (9), - one or more panels (22 or 23) located at each corner (14) of the tiling, with a clip which can be engaged in the upper flange (6) of the horizontal section (2) and a support flange integral with the panels in order to hold the tiles at the corners. Application to the field of construction and of building when it is necessary to operate on new constructions or to renovate the facades of buildings from the outside. <IMAGE>
