Abstract (en)

[origin: EP0657643A2] Fuel injection device for internal combustion engines with a high pressure accumulator (9), fillable by a high pressure fuel pump (1), from which accumulator high pressure lines (13) lead off to the individual injection valves (15). At the same time control valves (17) are inserted in the individual high pressure lines (13) in order to control the high pressure injection to the injection valves (15), together with an additional pressure reservoir (19) between the said control valves (17) and the high pressure accumulator (9). In order at the same time to be able to modify the rate-of-discharge curve on the injection valve, the control valve (17) has a hydraulic restrictor (51) arranged on an additional flange (39) on the valve element (23) and a damping chamber (53) formed between the flange (39) and a flat valve seat (47), the restricted relief of which chamber retards the opening movement of the valve element (23) at the start of injection. <IMAGE>
