Abstract (en)
A refrigerator has a fermentation section (106) adapted to receive a food product, and a heater (113) for warming food product therein. The fermentation section (106) can be in the form of a recess, and a food product removably supported therein using a holder (115). When mounted in the recess, the holder substantially closes the open face of the recess to isolate the fermentation section (106). <IMAGE>
