Abstract (en)

[origin: WO9501730A1] A process for converting fresh, low value animal materials into feed products comprises mixing predetermined proportions of fresh, low value animal materials and pumping them through a size reducing means and mixing them in a screw type extruder with starch and protein bearing ingredients such as cereals, cereal substitutes, rice, gluten and root crops to produce a cooked extrudate suitable for use, for example, as a pet food or snack product, which can be specifically tailored to meet all the end consumer's nutritional requirements.
