Abstract (en)

[origin: WO9405731A1] Solvent-free, oil-in-water emulsion polishes, especially useful as automotive polishes, with application, buffability and durability characteristics comparable to solvent-based polishes are described which are substantially free of added organic solvents and conventional surfactants. These emulsion compositions comprise 0.05-25 % of a polymeric silicone wax, 0.1-25 % of a polyorganosiloxane resin, an effective amount, preferably from 0.05-5 %, of a polymeric electrostatic emulsifier such as an acrylates/C10-C30 alkyl acrylate cross polymer which takes the place of conventional surfactants with the balance comprising water.
