Abstract (en)
[origin: WO9405764A1] The object of the invention is to obtain granulated washing and cleaning agents having the usual composition, a primary washing and cleaning power comparable to the primary washing and cleaning power of usual commercially-available products, but whose secondary washing power has big advantages. For that purpose, agents are used which contain determined polymer polycarboxylates as granulated builder components. Preferred textile washing agents contain 8 to 40 % by weight anionic and non-ionic surfactants, including soap, 15 to 45 % by weight zeolite and/or crystalline layered silicates, in particular zeolite, 0.5 to 8 % by weight sodium or potassium carbonate and 0.5 to 15 % by weight, preferably 2 to 10 % by weight, in particular 3 to 5 % by weight, granulated polymer polycarboxylates. These agents may be produced in the usual manner by mixing at least two granulated components, of which one contains the polymer polycarboxylate.
