Abstract (en)

[origin: EP0658334A1] A refuse container has a container body (5) which is open at the top and which, when it is put to use, is closed with a lid (3) which has a likewise closable feeder opening. To prevent the lid (3) coming loose from the container body (5) which is closed by it, a lid-securing means is provided whose one part is designed in the form of a plurality of catch elements (8) which are arranged spaced apart from one another and which protrude elastically from the container body (5) or from the lid (3), and whose other part is designed as an abutment (5, 9) for these catch elements, with which abutment the catch elements (8), which are inaccessible after closure of the container body (5) with the lid (3), engage in the manner of a safety catch. <IMAGE>
