Abstract (en)  
[origin: EP0658381A1] The appliance for squeezing out pasty material contained in cartridges (10) has a cartridge holder (4) which is constructed in a manner resembling a half-shell and is connected to a supporting wall (5). The supporting wall (5) has, next to a passage opening (6), which is constructed such that it is open on one side, on that side (7) of the supporting wall (5) which is directed towards the interior of the cartridge holder (4), a recess (8) which has a circular cross-section and is arranged coaxially adjoining the passage opening (6) in the radial direction. <IMAGE>
