Abstract (en)

[origin: EP0658383A1] The invention relates to an arrangement for forming strip-shaped material with at least one adjustable tool-carrying module (13, 14), which can be actuated by means of a drive (5). According to the invention, at least two modules (13, 14) are provided, each carrying at least two independently usable tools (30) and/or at least one processing unit (113), which modules (13, 14) can be adjusted in the longitudinal and/or transverse direction relative to the feed direction (12) of the material (3) to be processed, directly from one working position into another, specified working position, via a driving device (27, 96) between the individual working strokes, and that each module (13, 14) has an activating unit, moved along with it and carried by it, for each tool carried by the respective module (13, 14) and/or each processing unit (113) carried. <IMAGE>
