Abstract (en)

An opening-closing device with a lid (1) is obtained by thermoforming from thermoformable sheet material and comprises a relatively rigid perimeter frame or framework (2) bounding an internal space and designed to engage the rim of a container body, a lid (3) which can be seated removably in the space within the frame (2) and which is linked integrally thereto by means of at least one flexible portion (4) acting as a hinge, means (18, 26, 10) for retaining the lid in the closed position and an operating grip (5) for the lid (3) placed on the side opposite the hinge (4). <IMAGE>
