Abstract (en)

[origin: EP0658489A1] Device for withdrawing (delivering) granules (pills), contained in a container (10) of the type comprising a dispenser body (1) consisting of two identical parallel cylindrical parts A and B joined together by a spindle (2), the said parts A, B having cutouts (4) which are offset from a part A to the other B; - a cylindrical washer (6) having a radial slot connected to an axial passage (7) designed to interact with the axle (2), and at least one axial recess (8) for allowing products to pass from the first part A to the second B, the said washer (6) having a diameter slightly larger than the internal diameter of the neck of the container so as to allow it to be fitted tightly onto the circular end of the container; - a receptacle cap (11) which fits onto the circular mouth of the container and has means (12, 17) for driving the dispenser body in rotation, and in which the first part A, the second part B and the washer (6) have a thickness slightly greater than the diameter of a product. <IMAGE>
