Abstract (en)
[origin: EP0658666A1] The fastening system for façade panels (1) comprises a substructure which is formed by profiles, is fastened on a wall and has carrying elements (6), on which there may be fitted panel-carrying profiles (2) which are connected to the rear side of the façade panels. Per façade-panel element (5), the carrying elements (6) comprise a fixed-bearing carrying element (7) and at least three loose-bearing carrying elements (8). The fixed-bearing carrying element (7) is preferably arranged in an upper corner region of a façade-panel element (5) and fixedly connected to the corresponding panel-carrying profile (2) of the façade-panel element (5). Furthermore, the fixed-bearing carrying element (7) exhibits an adjustment device which permits horizontal and vertical adjustment. The lift-bearing carrying element (8), preferably in the other upper corner region of the façade-panel element (5), is likewise provided with an adjustment device for vertical adjustment. The fastening system according to the invention permits simple mounting and alignment of the façade panels and is a statically determinate system which avoids stresses due to heat expansion within the system. <IMAGE>
