Abstract (en)
[origin: WO9405182A1] A sampling device for perfume comprises a perfume sample support film (1) to be stuck to a presentation sheet (3) such as paper, cardboard, at least one perfume sample (5) in the form of a gel applied to the support film (1) and a removable protective film (6) applied to this sample which, when removed from the support film (1), causes the perfume sample (5) to be removed from the support film (1) due to its adhesion to said protective film (6). This allows the perfume to be tried by application to the skin.
