Abstract (en)
[origin: WO9404349A1] A flexible protective and waterproofing membrane (10) includes a flexible polymeric sheet (14) having an open-textured surface on each of its opposite faces defining interconnected internal voids open to the atmosphere and capable of being impregnated by a cementitious bonding material. In the described preferred embodiments, each of the open-textured surfaces is a fibrous surface layer (15, 16), and wherein at least one of the fibrous surface layers is pre-impregnated with a cementitious bonding material based on Portland or other water hardenable cement (17) which is substantially in a non-hydrated condition.
