Abstract (en)
[origin: WO9407100A1] The present invention relates to an apparatus (1) efficiently producing brick (53). More specifically, the invention relates to an automated, ultra low profile, continuously moving dryer, kiln and brick handling system which provides efficient, effective heating of the brick, and wherein the kiln uses only top burners (34). The invention thus eliminates the need for burners placed both on top and below the kiln or in other positions throughout the kiln, to provide effective heating.
