Abstract (en)
[origin: EP0659357A1] Ski boot with a pivoting front cap including a rigid shell base (1) on which is at least partially articulated an upper (2) consisting of a front cap (3) and of a rear cap (4), the front cap (3) being mounted pivotably in the end zone (6) of the shell base (1) and covering over a longitudinal slot (5) made in its upper front part. On either side of the longitudinal slot in the front cap (3) are defined two transverse tongues (9', 9") which are connected together by means of at least one flexible traction element (18) interposed between an anchoring element (19) of one of the transverse tongues (9") and a manoeuvring member (20) integral with the other transverse tongue (9'), in order to constitute an inner clamping device (17) for the foot. According to the invention, the front part (16) of the front cap includes apertures (23) capable of permitting its free sliding with respect to corresponding spacers (21) of tongues (9') and (9"), so as to be pressed on the latter permanently and regardless of the relative position of the tongues as a function of the state of the internal clamping device for the foot. <IMAGE>
