Abstract (en)

[origin: EP0660056A1] A door panel for a thermally insulated compartment, especially a refrigerator compartment, is designed as a dual-wall panel element (1) which is filled with insulating material and consists of a flat case (3) which is open on one side, is preferably made of sheet metal, and is closed by a covering plate (2) preferably made of sheet metal. The edges (4) of the flat case and of the covering plate (2) have connecting elements (6) which can be brought into mutual operative engagement. At least one insulating element (6) serving for the thermal separation between the flat case (3) and the covering plate (2) is arranged in the connection region of the connecting elements (6). The insulating element is a plastic profile strip arranged on the inner side of the frame wall (4) of the flat case (3). <IMAGE>
