Abstract (en)

[origin: WO9203232A1] The present invention relates generally to a new method for uniformly coating a structure and an apparatus for doing the same. The structure to be uniformly coated is completely immersed in the coating fluid and the coating fluid is drained in a controlled manner. An apparatus is also provided that has at least one sidewall that may be sloped or curved in a unique way to control the draining of the coating fluid in order to provide the structure with a uniform coating.
