Abstract (en)
[origin: WO9406630A1] In a process and device for carrying away and supplying printing plates (13, 14), the problem consists in gently supplying to and carrying away from a plate cylinder (2) a printing plate with its colour-bearing side. During removal of the plate, at least one inking roller (6, 7, 8, 9) presses against the printing plate located on the plate cylinder, the printing plate beginning (69) is then released and elastically inserted into a storage shaft (17) by means of its own elasticity and is carried away by transport means.
