Abstract (en)
[origin: WO9407140A1] The present invention relates to a separation method which finds application in immunological detection (e.g. in immunoassay and immunosensors), to a method suitable for use in detection, to a sensor and to a test-kit. The invention provides, (inter alia), a separation method, suitable for use in an immunological method for the detection of an entity, which separation method includes effecting attachment of an auxiliary species to a support material by use of an additional auxiliary species and a reaction partner for the additional auxiliary species. The additional auxiliary species may be, for example, a ligand or a binder.
