Abstract (en)
An adjustment mechanism for adjusting the height of an element, for example a work surface, a sink unit, a cupboard, a wall part or the like, comprises at least two vertical guides disposed at horizontal mutual distance; a first and a second support for connecting to the element and each movable along a guide; a third support for connecting to the element and movable along a vertical guide, which support has a vertical distance relative to at least one of the first and second support; and drive means connected to control means for adjusting the height of the element.
