Abstract (en)
Protrusions 17 facing inside from the left and right side walls 12 are made in two locations at a predetermined distance from each other along the length of the resilient contacting strip 15 under it. The parts of the resilient contacting strip 15 corresponding to the said left and right protrusions 17 are made wider than the other parts of the strip. As the result of this, when the resilient contacting strip 15 is bent downward, it comes in contact with the entire length of the protrusions 17 from their bases. <IMAGE>
