Abstract (en)  
[origin: WO9406921A1] The present invention provides methods for treating or preventing feline leukemia virus infections comprising, administering to a feline a vector construct which directs the expression of at least one immunogenic portion of a feline leukemia virus antigen, such that a cellular immune response is generated. Also provided are methods and vector constructs for treating or preventing feline immunodeficiency virus infections, either separately or in combination with the above-described methods for treating or preventing feline leukemia virus infections.
