Abstract (en)
[origin: GB2270931A] A paper making machine (10) is adapted to create a paper embossed eg on both sides by passing the web (17) after forming and before drying through an embossing nip (18) (19) having resilient surfaces. The nip components (18, 19) which may be rolls and/or belts may have their embossing design engraved thereon by means of a laser controlled by data derived by scanning a pattern. The resilient material may be applied in one or more sections to the rolls (18, 19) and can be engraved first while wrapped round a dummy roll. <IMAGE>
