Abstract (en)
[origin: WO9317184A1] The invention relates to an adjusting pile (4) having a measuring/reference point (12) for use in connection with manual/mechanical repositioning/packing of tracks (1 - 3), comprising a foundation member (5) and a member (6, 6', 7, 7') adjustably arranged thereon for height and carrying a reference point carrying member (11), the reference point (12) thereof being adjustable within the horizontal plane in relation to the foundation member (5). According to the invention, one has aimed at providing a very simple adjusting pile, both constructively and functionally (with regard to operation). To this end, the member (6, 6', 7, 7') adjustable for height is displaceably arranged on the foundation member (5) respectively fastenable to the same in the position adjusted for height, the member (6, 6', 7, 7') adjustable for height having a horizontally extending guidance (10') for linearly displacement to and fro in the horizontal plane for the reference point carrying member (11) which, in adjusted position of displacement, is fastenable in relation to the member adjustable for height.
