Abstract (en)
[origin: WO9407280A1] A switchboard cable (4) connected to a printed circuit board (1) projects into a notched passage (7) of the printed circuit board (1) in such a way that its center line coincides with the mid-plane of the printed circuit board. Clip-like clamps (3) are set on both sides of the printed circuit board, bridging the passage (7) and clamping the end of the cable. The individual leads (5) of the switchboard cable (4) can thus be guided in a stretched state to the connections (6) of the printed circuit board (1).
