Abstract (en)
[origin: EP0662372A1] The rear end of the shaft (2) is non-turnably held by the main section (1). A grip section (3) is pushed onto the rear part of the main section, so as to be non-turnable. Grip elements (4) are inserted in groove-like apertures (1c,3c) in the main section and/or grip section. A profiled filling ring (9) is located between main and grip sections. A filler part and/or a spacer ring may be inserted into the end of the grip. An impact part may also be fitted into the end of the grip. The part consists pref. of hardened steel, and engages on the end of the grip.
