Abstract (en)
[origin: EP0662457A1] A method of producing heatable mirrors comprising depositing onto a ribbon of hot glass (1) during the production process a reflecting coating (2) whereby the mirrors so formed have a visible light reflection of at least 70% and depositing an electroconductive heating layer (7) onto the mirrors. The present invention also provides a heatable mirror comprising a glass substrate carrying a non-metallic reflecting coating whereby the mirror has a visible light reflection of at least 70% and an electroconductive heating layer deposited on the coated substrate. <IMAGE>
