Abstract (en)

[origin: EP0663478A1] On the lower vehicle section (14), a first holder device is provided to which a vibration device can be selectively fitted and removed. The vibration device has an assembly base which can be suspended from the holder device by means of hook sections. The first holder device comprises a holder plate arranged on a front side of the lower vehicle section, and a counter plate is provided on the vibration device. The counter plate with the vibration device fitted locates on the holder plate. In the area of an upper edge of the counter plate at least one hook-type section is provided which engages over an upper edge of the holder plate.
