Abstract (en)
[origin: EP0663481A1] The tank (2) has a suction hose (3) connected to it and borne by boom (6) pivotable around a vertical axis and alterable to the length required. There is a horizontal locating platform (4) on the tank for accommodating the suction hose. The suction hose is connected to the tank by means of a rotatable through passage (11). The boom is fixed to the locating platform which in turn is pivotably located around a concentric axis to the through passage for the suction hose. The locating platform is rectangular and the through passage and the boom are arranged in the area of the same narrow side of the rectangular locating platform but in different corner areas.
