Abstract (en)
[origin: EP0663488A1] The sealing component is formed as a loop thread seal (22) which has loops (23) with a forward thread (25) and a back thread (26), the two threads not overlapping, or alternatively, they may overlap. The forward and back threads are arranged in the configuration of an eight or a multiple eight or a small figure 1. The loops are formed from threads which run in screw-line and/or spiral-form and/or plait-shaped formation. The loops or the forward and back threads of each loop run vertically or at an acute or obtuse angle to the longitudinal extent of the ventilation cap. The loops are brought together in adjacently arranged bundles.
