Abstract (en)
[origin: EP0663498A1] The core pins work in conjunction with spring-loaded housing pins on operation with a pin-side suitably cut-in key (16) in the sense of a release of a rotary movement of the core (12). In its core there is at least one further stop part (17), which with the key in its insert direction (18) is adjustable against spring force from a stop position with pref. radial stop engagement into a rotary release position. In the housing (11) is a ring groove (19), which is movement free space for the rotated stop part (17). The ring groove of the housing is arranged outside its pin area, and the stop part of a radial core ring projection adjustable in the ring groove is operable with the key point.
