Abstract (en)

[origin: EP0663500A1] The bolt pins in the closure position of the pane (1) and the drive rod (3) can be brought into locking engagement with a closure component (8) on the fixed frame (6). The closure component has a pivotably movable pivot bolt located in a face-side recess (6'). The closure component has a pivotably movable pivot bolt located in a face-side recess (6') of the fixed frame (6) which through the drive rod-bolt pin (4) activating it in the closed position can be pivoted on the face side out of the fixed frame (6). The pivot bolt is formed as a two-armed angle lever fitted in a pocket (6') in the fixed frame and freely pivotable around a link bolt (10), which apart from a longer formed locking arm which can be brought into outwardly pivoted locking engagement has an angled shorter activation arm (8'').
