Abstract (en)  
[origin: DE4234019A1] The alkyl- and/or alkenyloligoglycoside ester sulphate salts described can be prepared by transesterifying, in the presence of alkaline catalysts, alkyl- and/or alkenyloligoglycosides of the formula (I):  $R_{<1>-}O-[G]_p$ , in which  $R_{<1>}$  is a straight-chain or branched-chain alkyl and/or alkenyl group with 4 to 22 carbon, G is a saccharide group with 5 or 6 carbon atoms and p is a number from 1 to 10, with alpha -sulphocarboxylic acid lower-alkyl ester salts of formula (II), in which  $R_{<2>}$  is hydrogen or an alkyl group with 1 to 20 carbon atoms,  $R_{<3>}$  is a straight-chain or branched-chain alkyl group with 1 to 4 carbon atoms and X is an alkali metal. The products are suitable for use in the production of a wide variety of surface-active agents.
