Abstract (en)

The invention relates to a cigarette dispenser which is formed by a first chamber (6) in which the cigarettes (7) are stacked, a second chamber (8) to accommodate at least one battery (9), an internal wall (10) which separates the two chambers and has electrical means of contact which form part of an electrical circuit with resistance wire (12), a small plate (11) movable along the internal wall provided with contact means which, together with the contact means on said wall, close said electrical circuit, when said plate is moved to its extreme position, said resistance wire being mounted on said plate. <IMAGE>
