Abstract (en)

[origin: EP0664094A1] At least one of the ends (3) of the section (1) of the cross member is squashed, cut and bent to form engagement hooks (14) which can be hooked into slots (24) in a first wall (20A) of the upright (20), and comprises another bend (9) to form a shoulder that abuts against a second wall (20B) of the upright (20), which is adjacent to said first wall (20A); a rigid connection is thus formed between upright and cross member.
