Abstract (en)
[origin: EP0664142A1] The device comprises a box (2) containing the longitudinal support (3), held in a cavity (10) and has inner surfaces (28) guiding the support in the latter swivel part (37). The front end of the box has a link element (23) interacting with the link. The adjustment (5) consists of a lever (51) in a plinth (4) and possessing an eccentric inner surface on which rests a pin (38) cooperating with a connecting element (30). The adjusting lever has at least a partly cylindrical outer surface (54) having a peripheral hole for the connecting element.
